

Shivam Narayan

Software Engineer Trainee | Frontend | Backend

8292420948 | Bangalore | [Github](#) | [HackerRank](#) | sshivam6495@gmail.com

Career Objective

Immediate Joiner with 1-year apprenticeship in scalable web app development. Skilled in Python (Django, Flask, FastAPI), JavaScript/TypeScript, and React.js (Redux, Hooks), with proficiency in HTML5, CSS3, and RESTful APIs. Strong in SQL, Git, Docker, AWS, and CI/CD. Knowledge of OOP, data structures, and algorithms. Familiar with Agile, JIRA, and modern SDLC. Experienced in AI (LangChain, Hugging Face, RAG) and microservices with Kafka, TDD, and performance optimization. Spearheaded cross-functional projects, consistently met tight deadlines, and ensured accurate, high-quality deliverables by proactively collaborating with team members and adapting to evolving project requirements.

Work Experience

Software Engineer Apprentice

Ascendum Solutions Pvt. Ltd | Bangalore

Oct 2024 – Present

- Developed customer enterprise solution with web and Android support, streamlining onboarding and secure role-based workflows, resulting in 20% improvement in efficiency.
- Developed scalable React.js frontends utilizing TailwindCSS, Material UI (MUI), and ShadCN to deliver efficient, maintainable, and responsive UI components.
- Integrated REST API via Axios for real-time data synchronization and enhanced application performance.
- Implemented state management using Redux Toolkit and Context API, improving maintainability and scalability.
- Drove a 25% reduction in initial load time by optimizing build performance with Vite and Webpack.
- Collaborated in Agile sprints with cross-functional teams, ensuring seamless feature integration, code reviews, and timely project delivery.
- Utilized Git version control (branching, pull requests, and reviews) to maintain clean and collaborative workflows.

Tech Stack: React.js, React Native, TailwindCSS, MUI, ShadCN, Redux Toolkit, Axios, Vite, Webpack, JavaScript, API Integration

AI RAG Chatbot (Proof of Concept)

- Designed and deployed a multi-modal AI chatbot supporting unified conversational interaction with documents (PDFs), spreadsheets (Excel/CSV), and images.
- Engineered a full-stack web application featuring a React.js frontend for user chat, integrated with a Django backend for orchestrating data, model inference, and database connectivity via REST API and PostgreSQL.
- Developed end-to-end document and table-based Q&A using a Retrieval-Augmented Generation (RAG) pipeline with LangChain and Hugging Face Transformers (LLaMA, TAPAS, Donut, T5), and enhanced chatbot reasoning through custom embeddings, prompt optimization, and semantic similarity-based ranking.
- Implemented GitHub OAuth for user repository data access, integrated ChromaDB as a vector store for semantic search, and optimized retrieval latency by 30% and inference efficiency with Ollama for reduced compute costs.
- Enabled natural language querying across structured (SQL/Excel) and unstructured (PDF/text) data sources, supporting comprehensive database interaction.

Tech Stack: RAG, React.js, Django, Python, LangChain, Hugging Face Transformers, ChromaDB/VectorDB, Ollama, PostgreSQL, SQL, REST APIs, Docker, GitHub OAuth.

Education

Presidency University

B.Tech in Information Science Engineering (Specialization in AI/ML) | Bengaluru, Karnataka

08/2019 - 06/2023

Skills

Hard Skills

Python (Advanced), SQL, HTML5, CSS3, JavaScript, TypeScript, ReactJS, Tailwind CSS, Django, Flask, REST APIs, FastAPI, MySQL, PostgreSQL, MongoDB, AWS, Git, GitHub, Docker, Postman, Linux (Ubuntu), Vite, Webpack, Microservices, Retrieval-Augmented Generation (RAG), LangChain, Hugging Face, Fine-tuning LLMs, VectorDB, CrewAi,

Soft Skills

Agile (Scrum), SDLC, Passionate about clean code, Efficiency in coding, Data Structure

Projects

Uncovering Income Tax Fraud Detection – NASSCOM Top 50 | [GitHub](#)

Final Year Project | Team Size: 3 | Research Paper Published

- Developed a Machine Learning–based Fraud Detection System using Logistic Regression and Scikit-learn in Python.
 - Trained the model on a dataset of 50K records to identify income tax fraud patterns and anomalies.
 - Deployed the model as a real-time Android app using TensorFlow Lite for on-device inference and improved mobile performance.
 - Achieved high detection accuracy, efficient model optimization, and lightweight deployment suitable for edge devices.
- Tech Stack:** Python, Scikit-learn, TensorFlow Lite, Java, Android Studio, AI/ML
-

Certifications

- 5 Star Python & SQL – HackerRank
 - Frontend Development (HTML, CSS, JS) – freeCodeCamp
 - Python Full Stack Development – JSpiders, Main Branch Bengaluru
-
